

spacetimeadultanalysis

Below: A histogram of word similarities to “long”.

Below: A histogram of word similarities to “short”.

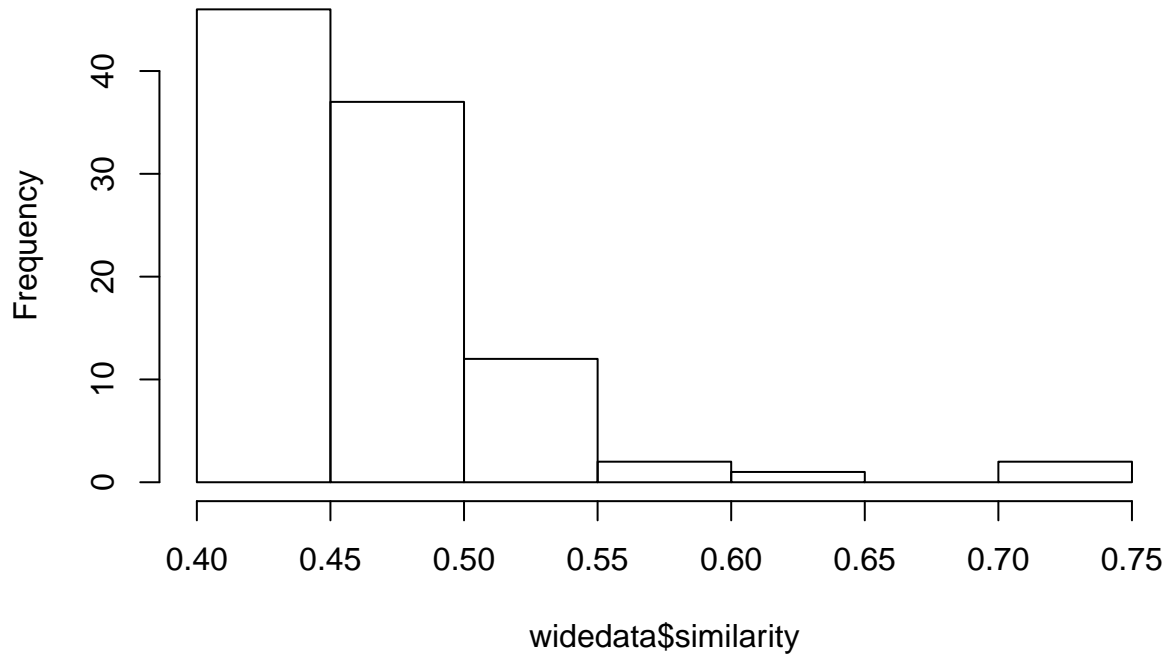

Below: A histogram of word similarities to “soon”.

Below: A histogram of word similarities to “wide”.

Histogram of widedata\$similarity

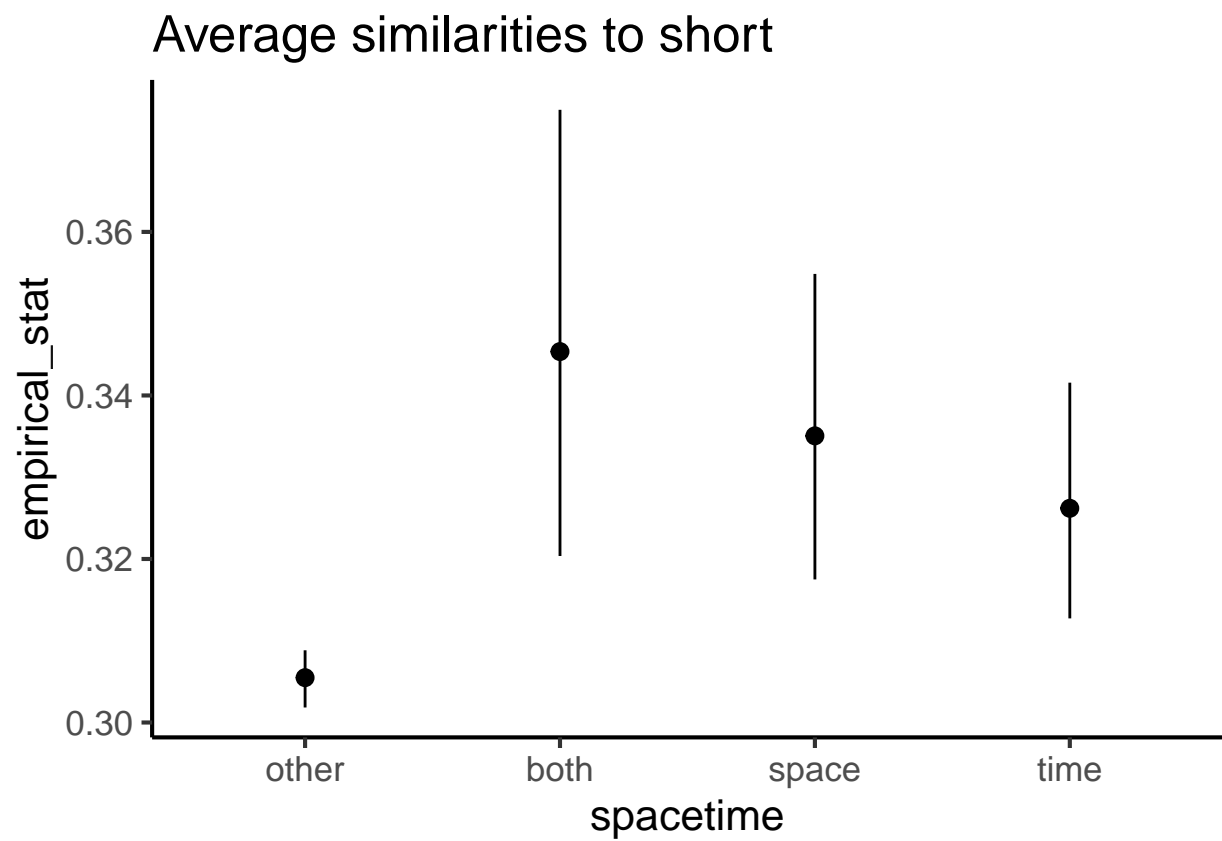

Below: Mean similarities of space, time, both and other words to “long”. Error bars here and throughout are 95% bootstrapped confidence intervals.

Below: Summed similarities of space, time, both and other words to “long”. Error bars here and throughout are 95% bootstrapped confidence intervals.

Below: Mean similarities of space, time, both and other words to “short”.

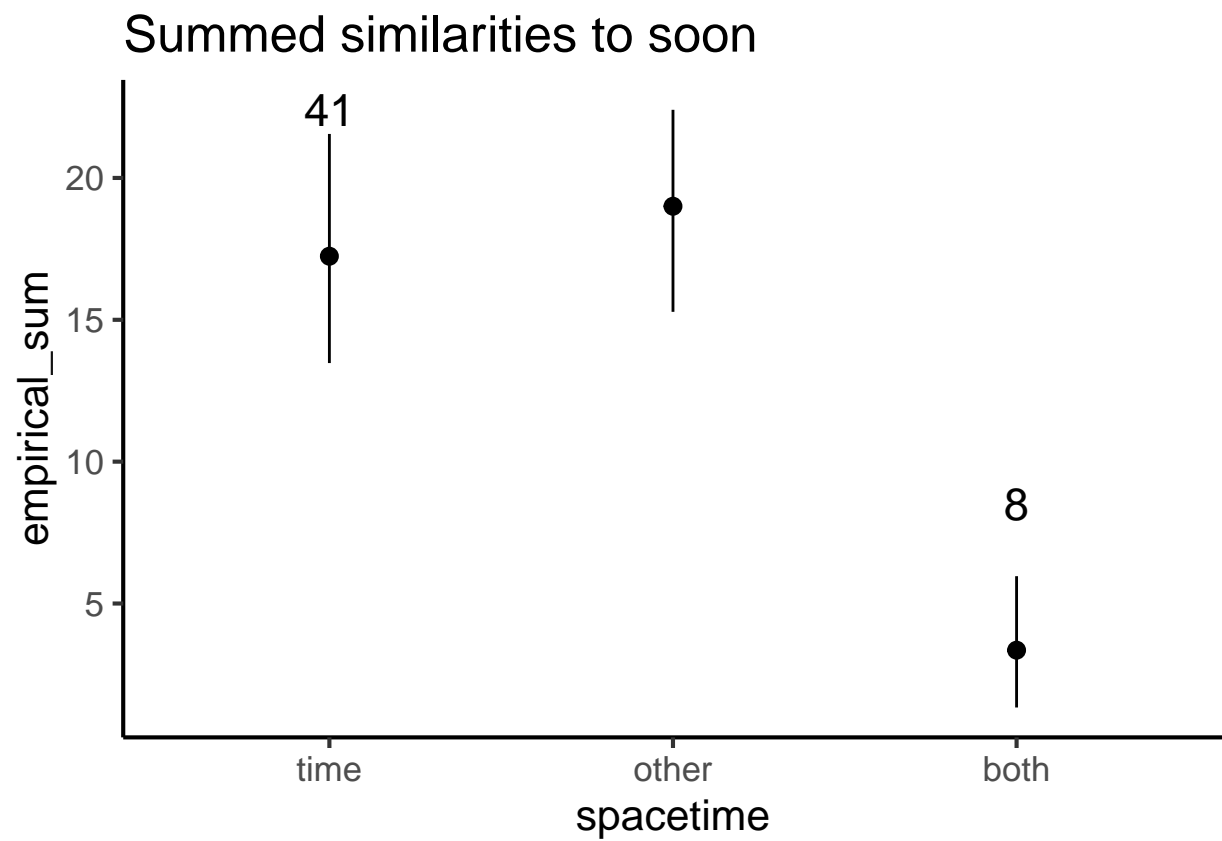

Below: Summed similarities of space, time, both and other words to “short”.

Below: Mean similarities of space, time, both and other words to “soon”. Note: there were no pure space words for ‘soon’.

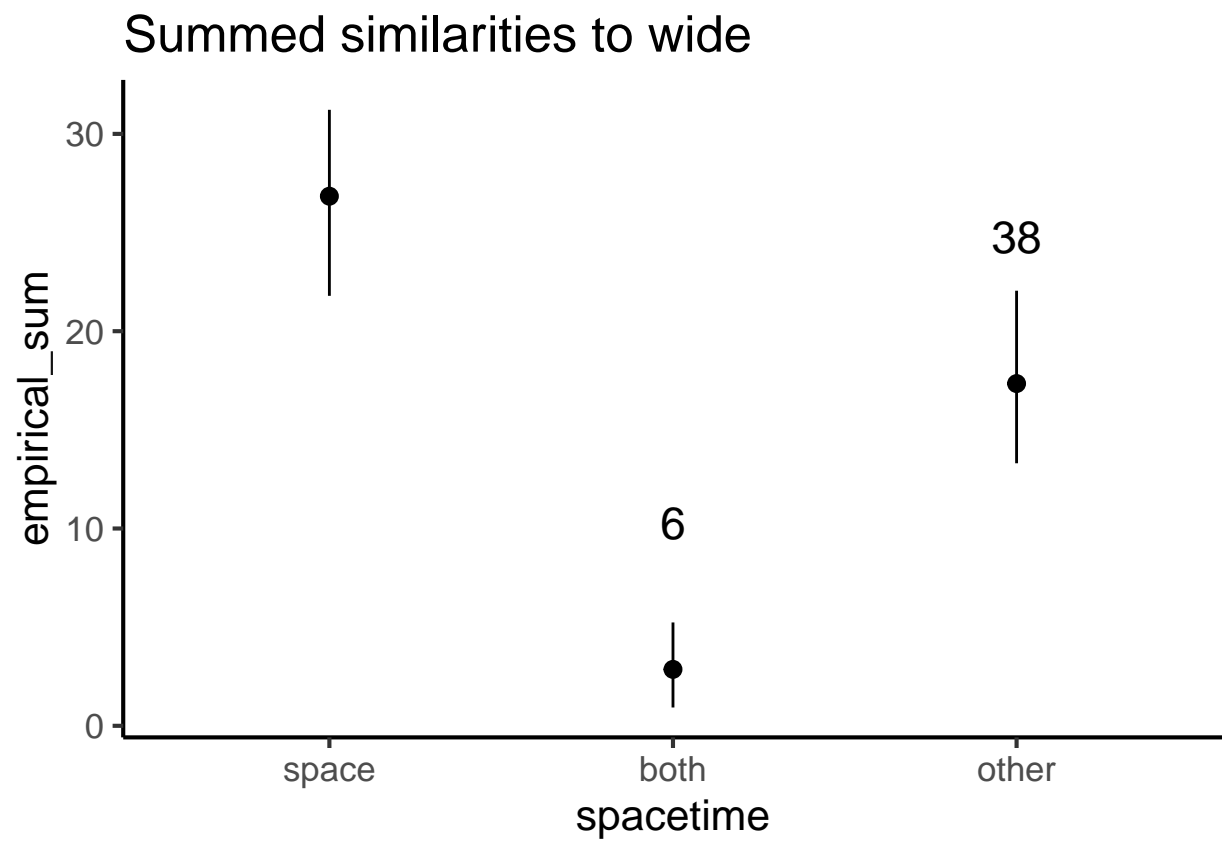

Below: Summed similarities of space, time, both and other words to “soon”. Note: there were no pure space words for ‘soon’.

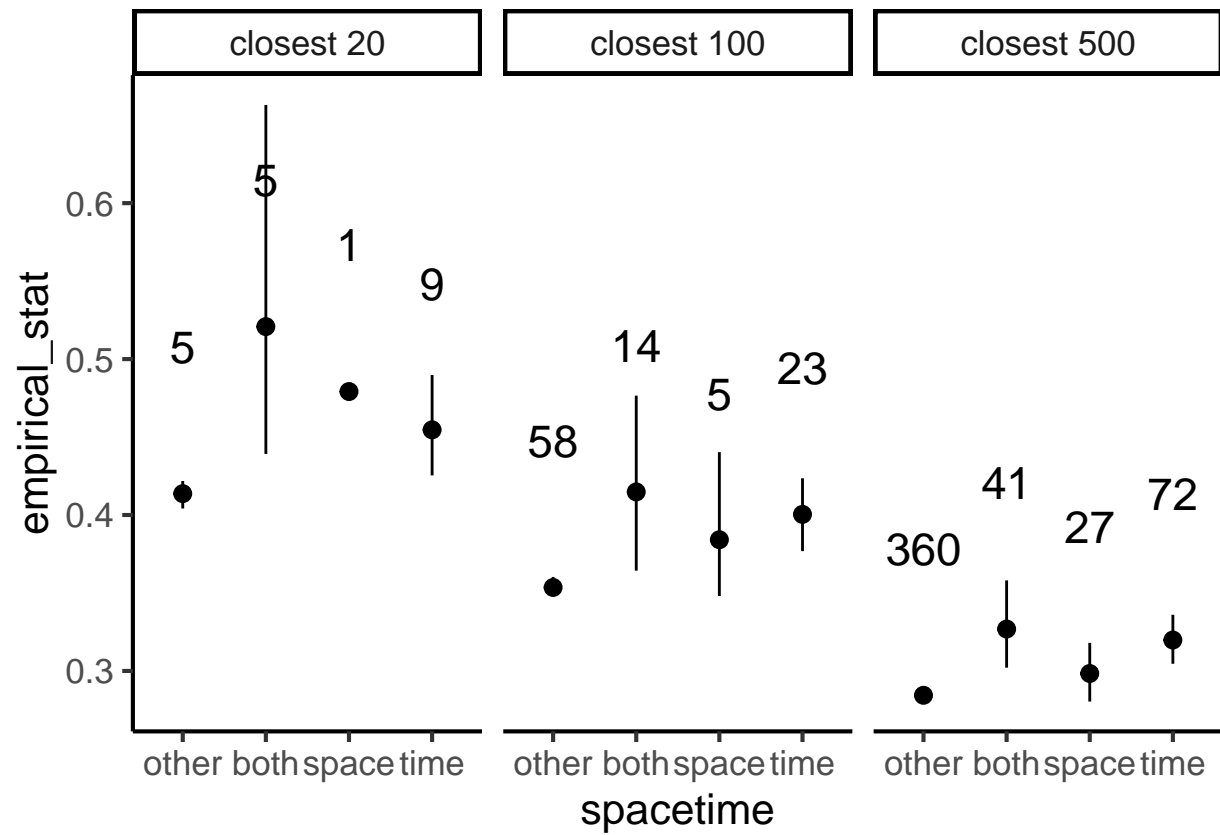

Below: Mean similarities of space, time, both and other words to “wide”. Note: there were no pure time words for ‘wide’.

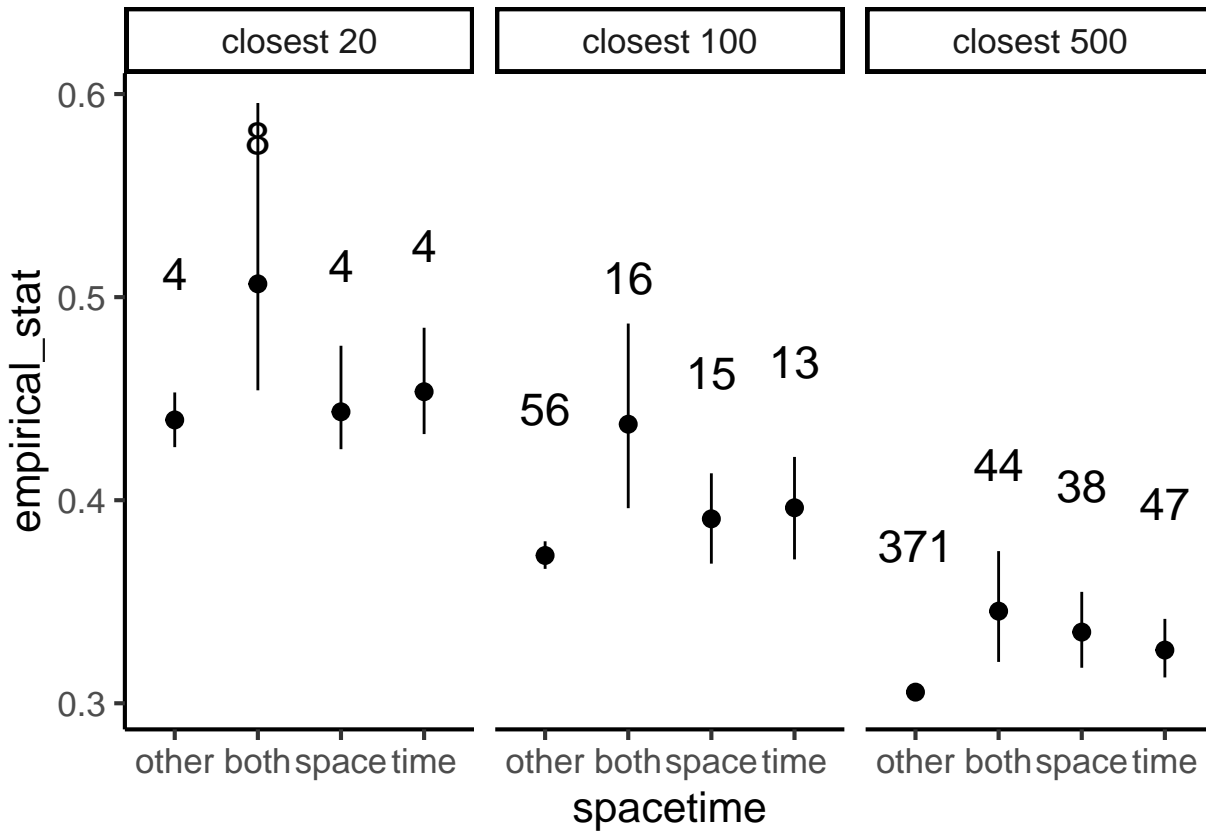

Below: Summed similarities of space, time, both and other words to “wide”. Note: there were no pure time words for ‘wide’.

Below: A plot of mean similarities of space, time, both and other words to “long” within the closest 20, 100, and 500 neighbors. The numbers on the plot denote the number of words of that type in that range of neighbors.

Below: A plot of mean similarities of space, time, both and other words to “short” within the closest 20, 100, and 500 neighbors.

Below: Linear model predicting similarity to “long” by word type (space, time, etc.) in the most similar 100 words, where we’re more likely to see differences. Space is the reference category.

```
##

Functions to get the counts

Below: Empirical values for the number of space words, the number of time words and the difference between the two within the first 100 nearest neighbors of long.

Below: Empirical values for the number of space words, the number of time words and the difference between the two within the first 100 nearest neighbors of short

Below: Bootstrapping (n=100) samples of number of space words, time words, and their difference from the sample of 6000 random words.

Import the random sample from the corpus with 6000 words.

Generate the null distribution for number of space words, time words, and their difference.

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

```
## `stat_bin()` using `bins = 30`. Pick better value with `binwidth`.
```

Below: Same analyses with the 500 observed sample and bootstrapped samples with N=500

Below: Empirical values for the number of space words, the number of time words and the difference between the two within the first 500 nearest neighbors of long.

Below: Empirical values for the number of space words, the number of time words and the difference between the two within the first 500 nearest neighbors of short

Generate the null distribution for number of space words, time words, and their difference – samples with n = 500
